

100 CRM Use Cases

A Comprehensive Guide to
Customer Relationship
Management with Generative
AI Solutions

By Srimi Pusuluri (CRM/AI Architect)

About Author

Srini Pusuluri - M.Tech IIT Kharagpur

FMR Distinguished Scientist in Indian Space and Defence, Salesforce CRM and AI Architect

Senior Salesforce (SFDC), AI, and CRM Program Architect, highly skilled in integrating cutting-edge technologies like artificial intelligence and customer relationship management (CRM) platforms. With over **20 years of IT experience** (including 12 years in CRM/Salesforce and 5 years in AI), the author is a recognized leader in designing and delivering innovative AI and CRM solutions across industries. They have extensive expertise in **security, multi-org setups, data integration, design patterns, DevOps, and AI strategy**, and hold **20 Salesforce and 5 AI certifications**.

His career spans roles at prominent organizations such as **Google, Elastic, GE, AT&T, IBM, and USAA**, where they have successfully led **large-scale digital transformation projects**. his responsibilities include delivering **architecture solutions for BILL CRM**, developing **Gen AI Agentforce solutions** like sentiment analysis, text summarization, and chat/call analytics, and implementing high-volume AI projects involving **Einstein Bots, Five9 CTI, Omni-Channel, and Service Cloud**.

The author is also known for managing complex **B2C Salesforce implementations** with millions of accounts and users, ensuring robust **IT governance**, and coordinating with **multiple implementation partners**. In addition, their expertise extends to **Sales Cloud, Service Cloud, CPQ**, and handling large-scale **data migrations**, including **Zendesk-to-Salesforce migrations** and **acquisition-based org mergers**.

As a trainer and R&D leader, they have pioneered integrating **LLMs (Large Language Models)**, such as **SFDC Agentforce, XGen, LLaMA, and ChatGPT**, into Salesforce for **Copilot AI** solutions. Their recent work focuses on applying **fine-tuning** techniques and **AI strategy** to enhance enterprise CRM systems and **customer data platforms (CDPs)**.

With a career marked by over **40 successful projects**, they are not only a skilled architect but also a thought leader in AI-driven CRM innovation, sharing insights through public speaking and training engagements

Preface

In today's fast-paced, digitally-driven world, customer relationship management (CRM) has evolved into more than just a tool for managing customer interactions. It has become the core of every successful business strategy, enabling organizations to understand their customers, anticipate their needs, and build long-lasting relationships. The integration of artificial intelligence (AI), machine learning, and automation into CRM systems has further transformed how businesses operate, offering unprecedented insights, personalization, and efficiency.

As a result, the demand for comprehensive, real-world use cases has never been greater. Businesses are seeking practical applications that demonstrate the full potential of CRM systems—beyond the basics of contact management and lead tracking. They are looking for ways to optimize customer journeys, improve sales forecasting, automate support processes, enhance customer retention, and deliver personalized experiences at scale.

This book was created to address that demand. By presenting **100 CRM use cases**, we aim to provide business leaders, CRM professionals, AI architects, and technology enthusiasts with a rich repository of scenarios that demonstrate how CRM, powered by AI and automation, can be applied to solve a wide range of challenges across industries.

From marketing automation and lead management to customer service optimization and post-support analytics, each use case in this book has been carefully curated to show how AI-driven CRM systems can revolutionize every step of the customer lifecycle. Whether you're a seasoned CRM expert or just beginning your journey into the world of customer management, this collection is designed to inspire and guide you as you explore the limitless possibilities of modern CRM technologies.

By sharing these **100 CRM use cases**, our hope is to empower businesses to unlock the full potential of their CRM systems and leverage AI innovations to drive success in a customer-centric era.

AI agents are becoming essential in customer relationship management (CRM) systems. The following support documentation provides a comprehensive guide for a course on building AI/ML CRM agents. It covers fundamental concepts, a course outline, and best practices for creating and maintaining the documentation.

Course Overview

This course teaches you how to design, build, and deploy intelligent AI agents for modern CRM systems. You'll learn the core concepts of AI and machine learning, how they apply to customer service and sales, and how to create autonomous agents that can automate tasks, analyze data, and provide personalized customer experiences. The course emphasizes practical skills using popular frameworks and real-world case studies.

Prerequisites

To get the most out of this course, you should have:

- **A foundational understanding of programming concepts:** This includes variables, loops, functions, and basic data structures.
 - **Familiarity with Python:** All code examples and assignments will be in Python.
 - **Basic knowledge of CRM systems:** Understanding what a CRM is and its core functions will be helpful.
-

Course Modules

Module 1: Foundations of AI and CRM

This module introduces the core concepts that power AI CRM agents.

- **Unit 1: Introduction to AI and Machine Learning**
 - What are AI, ML, and deep learning?
 - The difference between traditional programming and machine learning.
 - Key concepts: models, training data, and algorithms.

- **Unit 2: The Role of AI in CRM**
 - How AI is transforming customer service and sales.
 - Use cases: automated lead qualification, customer support chatbots, and predictive analytics.
 - Ethical considerations in AI for CRM.

Module 2: Building Blocks of an AI Agent

This module dives into the essential components of an AI agent, focusing on large language models (LLMs) and their capabilities.

- **Unit 1: Large Language Models (LLMs)**
 - Overview of LLMs (e.g., GPT, LLaMA, Claude).
 - **Prompt engineering** and techniques like zero-shot, few-shot, and chain-of-thought prompting.
 - Understanding the limitations of LLMs.
- **Unit 2: Agentic Architecture and Frameworks**
 - What makes an AI a "true" agent? (Perception, reasoning, action, memory).
 - Introduction to popular agentic frameworks like **LangChain** and **AutoGen**.
 - Understanding the role of tools and function calling.
- **Unit 3: Retrieval-Augmented Generation (RAG)**
 - The problem with static LLM knowledge.
 - How RAG enhances agents by retrieving and using external data.
 - Hands-on lab: building a basic RAG pipeline.

Module 3: CRM Agent Development and Deployment

This module focuses on the practical application of AI concepts to a CRM environment.

- **Unit 1: Integrating Agents with CRM Systems**
 - API integration with platforms like Salesforce, HubSpot, or Zendesk.
 - Building agents for specific CRM tasks, such as creating a new lead or updating a contact record.
 - Developing a "human-in-the-loop" workflow for quality control.
- **Unit 2: Advanced Agentic Workflows**
 - Creating multi-agent systems where agents collaborate to achieve a complex goal.
 - Case study: a multi-agent system for end-to-end customer support.
 - Using no-code/low-code platforms to build agents.

Module 4: Maintenance and Optimization

This final module covers the ongoing process of managing and improving AI agents.

- **Unit 1: Agent Evaluation and Performance Metrics**

- How to measure the success of an AI agent.
 - Key metrics: resolution rate, customer satisfaction (CSAT), and average handling time.
 - Debugging and troubleshooting common agent failures.
 - **Unit 2: Continuous Improvement and Feedback Loops**
 - Using user feedback to retrain and refine agent behavior.
 - Implementing a robust monitoring and logging system.
 - Staying updated on new AI models and techniques.
-

Getting Help and Support

This documentation is a living resource and will be updated regularly. If you need help, here's where to find it:

- **FAQ Section:** Check the FAQ first. Many common questions are answered there.
 - **Course Community Forum:** Post your questions in the community forum. Our instructors and fellow learners are there to help. Be sure to provide as much context as possible, including code snippets and error messages.
 - **Contact Support:** For technical issues or private questions, you can contact the support team directly through the support portal.
-

Glossary

- **Agent:** An autonomous AI program that can perceive its environment, reason, plan, and take actions to achieve a goal.
- **Agentic System:** A system composed of multiple agents that can interact and collaborate to accomplish complex tasks.
- **CRM (Customer Relationship Management):** Software that helps businesses manage and analyze customer interactions and data throughout the customer lifecycle.
- **Function Calling:** The ability of an LLM to recognize when it needs to call a specific tool or function (like an API) to complete a task.
- **Prompt Engineering:** The practice of designing and refining text prompts to get the desired output from an LLM.
- **RAG (Retrieval-Augmented Generation):** A technique that combines information retrieval with LLM generation to ground the model's responses in specific, external data.

CRM Terms and Abbreviations

1. **CRM (Customer Relationship Management):** A technology system that helps businesses manage interactions with current and potential customers. It often includes tools for sales, marketing, customer service, and support.
2. **Lead:** A potential customer or prospect who has shown interest in a company's products or services. Leads are typically captured through various marketing activities, such as web forms, ads, or events.
3. **Campaign:** A marketing effort aimed at promoting a product or service, typically delivered through multiple channels such as email, social media, and ads. Campaigns are often designed to drive awareness, generate leads, or increase conversions.
4. **UTM (Urchin Tracking Module):** A set of URL parameters used in digital marketing to track the effectiveness of online campaigns. UTM codes help marketers measure the performance of campaigns across different channels (e.g., Google Ads, social media).
5. **Lead Scoring:** A methodology for ranking leads based on their potential value to the business. Scoring criteria may include engagement data, demographics, and behavioral patterns.
6. **Lead Nurturing:** The process of developing relationships with potential customers throughout the buying journey, typically through personalized content and targeted communication.
7. **Opportunity:** A qualified sales lead that has been identified as having the potential to result in a closed sale. An opportunity usually has defined stages and is tracked in CRM systems.
8. **Sales Pipeline:** A visual representation of the stages a sales opportunity goes through from initial contact to closing a deal. Pipeline stages often include lead generation, qualification, meetings, proposals, and final decisions.
9. **Quote:** A formal document outlining the price for goods or services a company is offering to a customer. Quotes are often generated during the sales process and can include product descriptions, pricing, and terms.
10. **SLA (Service Level Agreement):** A formal contract between a service provider and a customer that specifies the expected level of service, including metrics like response time, resolution time, and uptime.
11. **Case:** A support request or ticket submitted by a customer to resolve an issue or query related to a product or service. Cases are managed within CRM systems to track resolutions.
12. **Customer Journey:** The path a customer takes from first becoming aware of a company or product, through interactions with the business, and ultimately, purchasing or using the product. It includes all touchpoints with the business.
13. **Customer Retention:** Strategies and efforts to keep customers returning to a business over time, ensuring loyalty and reducing churn. Retention efforts often focus on customer satisfaction and post-sale engagement.
14. **Churn:** When a customer stops doing business with a company, either by canceling a subscription, failing to renew, or discontinuing use of a product or service.

15. **Upsell:** Encouraging a customer to purchase a higher-end product or add-ons that increase the value of their purchase.
 16. **Cross-Sell:** Selling related or complementary products to an existing customer.
 17. **Forecasting:** The process of predicting future sales or revenue based on historical data, pipeline activity, and market conditions.
 18. **Entitlement:** A record that defines what services or support a customer is eligible for, based on their contract or subscription with the company.
 19. **Asset Management:** Tracking and managing customer-owned products or services (assets), including lifecycle stages like purchase, maintenance, upgrades, and replacements.
-

AI Terms and Abbreviations

1. **AI (Artificial Intelligence):** The simulation of human intelligence by machines, especially computer systems. AI enables systems to perform tasks that typically require human intelligence, such as visual perception, speech recognition, decision-making, and language translation.
2. **Machine Learning (ML):** A subset of AI that enables computers to learn from data and improve their performance over time without being explicitly programmed for each task.
3. **Natural Language Processing (NLP):** A field of AI focused on enabling computers to understand, interpret, and respond to human language in a natural way, such as text or speech.
4. **Sentiment Analysis:** An AI-based technique that analyzes text or speech to determine the emotional tone of the content, often categorizing it as positive, negative, or neutral.
5. **Predictive Analytics:** The use of data, statistical algorithms, and AI techniques to identify the likelihood of future outcomes based on historical data.
6. **Personalization:** AI-driven techniques to deliver customized content, recommendations, or experiences to individual users based on their preferences, behavior, or demographic information.
7. **Chatbot:** An AI-powered software application designed to simulate human conversation, typically used in customer service and support to answer questions or resolve issues.
8. **Recommendation Engine:** An AI system that suggests products, services, or content to users based on their behavior, preferences, or other users' interactions.
9. **OCR (Optical Character Recognition):** A technology that converts different types of documents, such as scanned paper documents or images, into editable and searchable data.
10. **Automated Workflow:** A set of automated steps within a process, typically using AI or automation tools, to streamline tasks such as sending emails, assigning leads, or routing cases.
11. **Real-Time Analytics:** The process of analyzing data as it is being generated to provide immediate insights and enable faster decision-making.

12. **Conversational AI:** AI systems that can engage in a dialogue with humans using natural language, often used in chatbots or voice assistants.
 13. **Predictive Maintenance:** Using AI and machine learning to predict when an asset or piece of equipment is likely to fail, allowing businesses to proactively schedule maintenance.
 14. **Data Enrichment:** The process of enhancing raw data by adding additional relevant information from external sources, improving the quality and usability of the data.
 15. **Deep Learning:** A subset of machine learning that uses neural networks with many layers to analyze and model complex patterns in large datasets.
 16. **KPI (Key Performance Indicator):** A measurable value that indicates how effectively a company is achieving its key business objectives.
 17. **Automation:** The use of technology to perform tasks with minimal human intervention, improving efficiency and reducing the chance of errors.
-

Abbreviations in the CRM Context

1. **B2B (Business to Business):** Transactions or relationships between businesses, such as between a manufacturer and a wholesaler, or a wholesaler and a retailer.
2. **B2C (Business to Consumer):** Transactions or relationships between businesses and individual consumers, such as a retail store selling products to customers.
3. **CLV (Customer Lifetime Value):** A prediction of the net profit attributed to the entire future relationship with a customer.
4. **CSAT (Customer Satisfaction Score):** A measurement of customer satisfaction with a product, service, or support interaction, usually captured via surveys.
5. **CTI (Computer Telephony Integration):** A technology that allows computer systems to manage phone calls, often used in customer service and call centers to streamline interactions.
6. **ERP (Enterprise Resource Planning):** Business management software that integrates core business processes such as finance, HR, supply chain, and CRM.

Table of contents

Marketing and Campaign Management	1
Lead Generation, Nurturing, and Conversion	5
Account and Opportunity Management	7
Quote, Order, and Subscription Management	8
Asset and Entitlement Management	9
Case and Support Management	11
Customer Experience and Retention	14
Post-Support Analytics and Optimization	19
Customer Analytics and Sentiment Use Cases	19

Marketing and Campaign Management

1. Campaign Management

- **a) Data Input:** Audience segmentation, marketing messages, campaign objectives, budget, and performance metrics.
- **b) How We Can Use Gen AI:**
 - AI can generate optimized campaign copy, email subject lines, and messaging based on audience persona.
 - AI can analyze previous campaign performance and suggest best practices or improvements.
- **c) Expected Output:** Optimized marketing content, automated campaign reporting, and higher engagement rates.

2. Advertising & Promotions

- **a) Data Input:** Ad content, target audience, channel preferences, and ad performance data.
- **b) How We Can Use Gen AI:**
 - Generate personalized ad copy based on the target audience's preferences.
 - Predict the best-performing keywords or ad placements using historical data.
- **c) Expected Output:** Higher-performing ads, better-targeted campaigns, and increased ROI.

3. Trial Signup (Free/Promotional)

- **a) Data Input:** Customer information (name, email, etc.), signup details, trial duration.
- **b) How We Can Use Gen AI:**
 - Auto-generate personalized welcome emails and onboarding materials.
 - Predict trial-to-paid conversion likelihood based on user engagement.
- **c) Expected Output:** Automated follow-up communications, improved onboarding, and increased trial conversions.

4. Market Research Analysis

- **a) Data Input:** Competitor data, customer surveys, market trends, industry reports.
- **b) How We Can Use Gen AI:**
 - Generate insights from large sets of market data, including sentiment analysis on competitors and industry trends.
 - Predict market shifts and recommend new product opportunities.
- **c) Expected Output:** Market research summaries, competitor insights, and identification of emerging trends for strategic planning.

5. Target Audience Segmentation

- **a) Data Input:** Demographics, purchasing behavior, engagement data.
- **b) How We Can Use Gen AI:**
 - Automatically segment audiences based on behavior patterns and preferences.

- Generate personalized content suggestions for each segment.
 - **c) Expected Output:** Clear audience segments for targeted marketing, personalized campaign strategies, and improved ROI.
- 6. **Campaign Strategy Development**
 - **a) Data Input:** Past campaign performance, customer segmentation, marketing goals.
 - **b) How We Can Use Gen AI:**
 - Generate optimal marketing strategies based on past performance data and current market conditions.
 - Suggest campaign themes, messaging, and channels for different audience segments.
 - **c) Expected Output:** Data-driven campaign strategies, tailored marketing plans, and increased campaign effectiveness.
- 7. **Campaign Budget Allocation**
 - **a) Data Input:** Campaign goals, available budget, cost estimates for channels.
 - **b) How We Can Use Gen AI:**
 - Predict the best allocation of marketing budget across various channels.
 - Generate suggestions for reallocating funds based on real-time performance.
 - **c) Expected Output:** Optimized budget allocations, better resource utilization, and higher ROI on marketing spend.
- 8. **Marketing Channel Selection**
 - **a) Data Input:** Target audience data, channel performance, cost-per-acquisition.
 - **b) How We Can Use Gen AI:**
 - Suggest the most effective marketing channels based on historical performance and audience preferences.
 - Generate forecasts for expected engagement on different channels.
 - **c) Expected Output:** Optimized channel strategy, better allocation of resources, and improved engagement rates.
- 9. **Campaign Content Creation**
 - **a) Data Input:** Campaign goals, target audience, content guidelines.
 - **b) How We Can Use Gen AI:**
 - Generate ad copy, email templates, social media posts, and blogs personalized to different segments.
 - Optimize content for specific goals like engagement or conversion.
 - **c) Expected Output:** Automated content creation, increased content relevance, and time savings on content production.
- 10. **A/B Testing Setup**
 - **a) Data Input:** Campaign variations, audience data, engagement metrics.
 - **b) How We Can Use Gen AI:**
 - Suggest the most effective variations to test based on past performance data.
 - Automatically analyze A/B test results to suggest winning strategies.

- **c) Expected Output:** Optimized A/B tests, faster decision-making on campaign strategies, and improved conversion rates.
- 11. Campaign Calendar Planning**
- **a) Data Input:** Campaign schedule, marketing events, holidays, and product launches.
 - **b) How We Can Use Gen AI:**
 - Generate optimized campaign calendars with ideal launch times for maximum engagement.
 - Predict campaign overlap issues and suggest resolutions.
 - **c) Expected Output:** Well-structured campaign calendar, maximized campaign effectiveness, and improved coordination across teams.
- 12. Marketing Automation Setup**
- **a) Data Input:** Customer journey data, engagement triggers, content assets.
 - **b) How We Can Use Gen AI:**
 - Auto-generate personalized marketing automation workflows based on audience segmentation and behavior patterns.
 - Predict which content and touchpoints should be automated for the best results.
 - **c) Expected Output:** Streamlined marketing automation, improved lead nurturing, and increased marketing efficiency.
- 13. Social Media Campaign Setup**
- **a) Data Input:** Social media metrics, audience demographics, campaign goals.
 - **b) How We Can Use Gen AI:**
 - Generate social media posts and ads tailored to specific platforms and audiences.
 - Predict optimal posting times and hashtags to maximize engagement.
 - **c) Expected Output:** Automated social media campaigns, better-targeted content, and increased social media engagement.
- 14. Email Marketing Template Creation**
- **a) Data Input:** Audience data, content goals, past email performance.
 - **b) How We Can Use Gen AI:**
 - Automatically generate email templates personalized for each segment.
 - Optimize subject lines, body content, and CTAs for higher engagement and conversion.
 - **c) Expected Output:** Engaging email templates, higher open and click-through rates, and reduced email creation time.
- 15. Digital Advertising Setup**
- **a) Data Input:** Target audience data, advertising budget, past ad performance.
 - **b) How We Can Use Gen AI:**
 - Generate ad copy and creative based on target audience behavior and preferences.
 - Suggest optimal ad formats and placements to maximize conversions.
 - **c) Expected Output:** Automated ad creation, improved ad targeting, and higher ROI on digital ad spend.

16. Landing Page Optimization

- **a) Data Input:** Landing page performance metrics, user behavior, conversion data.
- **b) How We Can Use Gen AI:**
 - Generate suggestions for improving landing page content, design, and CTAs.
 - Predict the most effective layout and content to improve conversions.
- **c) Expected Output:** Higher landing page conversion rates, optimized user experience, and increased lead generation.

17. Campaign Tracking Implementation

- **a) Data Input:** Campaign performance metrics, conversion tracking setup, engagement data.
- **b) How We Can Use Gen AI:**
 - Automatically generate tracking setups for different marketing platforms and channels.
 - Predict key metrics and KPIs to track for campaign success.
- **c) Expected Output:** Better campaign tracking setup, real-time campaign insights, and improved performance monitoring.

18. UTM Parameter Setup

- **a) Data Input:** Campaign URLs, source/medium, campaign names.
- **b) How We Can Use Gen AI:**
 - Generate UTM parameters for different campaigns and channels automatically.
 - Predict UTM tag structures based on performance tracking needs.
- **c) Expected Output:** Accurate campaign tracking, standardized UTM usage, and better visibility into campaign performance.

19. Campaign Retargeting

- **a) Data Input:** Campaign engagement data (clicks, views, open rates), customer segmentation data.
- **b) How We Can Use Gen AI:**
 - Generate personalized retargeting emails, ads, or messages based on customer behavior and previous engagement.
 - Suggest the best time and channel for retargeting based on historical data.
- **c) Expected Output:** Increased engagement with retargeting campaigns, improved conversion rates, and more precise audience targeting.

Lead Generation, Nurturing, and Conversion

20. Lead Generation

- **a) Data Input:** Customer contact info, lead sources, engagement data.
- **b) How We Can Use Gen AI:**

- Generate lead generation content (web forms, landing pages, etc.).
 - Use AI to predict the best sources for generating leads.
 - **c) Expected Output:** Higher-quality leads, improved lead engagement, and optimized lead generation processes.
- 21. Lead Nurturing**
- **a) Data Input:** Lead data, engagement metrics, customer journey details.
 - **b) How We Can Use Gen AI:**
 - Automatically craft personalized nurturing emails and drip campaigns.
 - Predict optimal times to engage based on past behavior and interaction patterns.
 - **c) Expected Output:** Higher lead conversion rates, automated follow-up, and personalized engagement.
- 22. Lead Qualification**
- **a) Data Input:** Lead demographics, engagement, and interaction data.
 - **b) How We Can Use Gen AI:**
 - Score leads based on historical data and engagement patterns.
 - Generate insights on the likelihood of conversion.
 - **c) Expected Output:** Efficient lead prioritization, automated lead scoring, and faster sales cycle.
- 23. Lead Conversion**
- **a) Data Input:** Lead status, sales interaction logs, and qualification criteria.
 - **b) How We Can Use Gen AI:**
 - Generate personalized conversion emails or offers based on lead data.
 - Predict the optimal approach to converting the lead based on past successes.
 - **c) Expected Output:** Higher conversion rates, personalized follow-up, and automated sales processes.
- 24. Lead Scoring Setup**
- **a) Data Input:** Lead engagement data, behavior patterns, demographic information.
 - **b) How We Can Use Gen AI:**
 - Automatically generate lead scoring models based on lead behavior and engagement data.
 - Predict the likelihood of lead conversion and assign lead scores accordingly.
 - **c) Expected Output:** Optimized lead scoring, faster lead prioritization, and improved sales efficiency.
- 25. Lead Source Tracking**
- **a) Data Input:** Lead generation data, marketing channels, conversion metrics.
 - **b) How We Can Use Gen AI:**
 - Automatically track lead sources and predict which channels are delivering the highest quality leads.
 - Generate insights into lead source attribution for better resource allocation.

- **c) Expected Output:** Clear insights into lead sources, optimized resource allocation, and better lead generation strategies.

26. Lead Assignment Rules Setup

- **a) Data Input:** Sales team data, lead demographics, and qualification criteria.
- **b) How We Can Use Gen AI:**
 - Generate lead assignment rules automatically based on team availability, expertise, and lead type.
 - Suggest optimal sales team assignments for leads based on predicted outcomes.
- **c) Expected Output:** Streamlined lead distribution, improved lead follow-up efficiency, and better lead-to-sale conversions.

27. Duplicate Lead Prevention

- **a) Data Input:** Lead data, CRM records, lead capture forms.
- **b) How We Can Use Gen AI:**
 - Automatically detect and merge duplicate leads in the CRM.
 - Suggest possible lead merges based on behavior and engagement patterns.
- **c) Expected Output:** Reduced lead duplication, cleaner CRM data, and improved lead management.

28. Lead Data Enrichment

- **a) Data Input:** Raw lead data, third-party data sources, company information.
- **b) How We Can Use Gen AI:**
 - Automatically enrich lead data by pulling additional information from third-party sources (e.g., industry, company size).
 - Predict missing information and fill in gaps in lead profiles.
- **c) Expected Output:** More complete and accurate lead profiles, better segmentation, and higher-quality leads.

29. Lead Categorization

- **a) Data Input:** Lead demographic data, behavior patterns, interaction history.
- **b) How We Can Use Gen AI:**
 - Automatically categorize leads based on their behavior and engagement levels.
 - Generate segmentation insights to place leads in the appropriate lifecycle stages.
- **c) Expected Output:** Optimized lead categorization, personalized lead nurturing strategies, and better-targeted follow-ups.

Account and Opportunity Management

30. Account Planning

- **a) Data Input:** Account details, previous interactions, sales history.
- **b) How We Can Use Gen AI:**

- Suggest account engagement strategies based on similar successful accounts.
 - Generate account plans using historical performance data.
 - **c) Expected Output:** Tailored account engagement strategies and action plans.
 - 31. Contact Follow-Up**
 - **a) Data Input:** Contact interaction history, communication logs.
 - **b) How We Can Use Gen AI:**
 - Auto-generate personalized follow-up messages or calls based on recent activity.
 - Recommend optimal follow-up timing based on past customer behavior.
 - **c) Expected Output:** Improved follow-up consistency and faster response times.
 - 32. Product Assignment to Opportunity**
 - **a) Data Input:** Opportunity details, customer requirements, product catalog.
 - **b) How We Can Use Gen AI:**
 - Suggest the best product combinations or bundles for the opportunity.
 - Generate product comparison sheets for sales reps.
 - **c) Expected Output:** Accurate product assignments and increased upsell potential.
 - 33. Opportunity Creation**
 - **a) Data Input:** Lead data, account info, opportunity details (expected revenue, timeline).
 - **b) How We Can Use Gen AI:**
 - Generate opportunity briefs and proposals based on customer needs.
 - Predict the probability of opportunity success based on past data.
 - **c) Expected Output:** Automated opportunity creation, better forecasting.
 - 34. Opportunity Stage Advancement**
 - **a) Data Input:** Opportunity progress data, stage requirements.
 - **b) How We Can Use Gen AI:**
 - Generate action plans or reminders for each stage.
 - Predict blockers that may affect opportunity progression.
 - **c) Expected Output:** Smooth opportunity advancement, higher close rates.
-

Quote, Order, and Subscription Management

- 35. Quote Creation**
 - **a) Data Input:** Product details, pricing, opportunity data.
 - **b) How We Can Use Gen AI:**
 - Auto-generate quotes with personalized pricing based on customer history.
 - Suggest discounts or promotions based on customer behavior.
 - **c) Expected Output:** Faster quote generation, increased accuracy.
- 36. Quote Approval**

- **a) Data Input:** Quote details, internal approval requirements.
 - **b) How We Can Use Gen AI:**
 - Automatically generate approval requests and escalate them based on priority.
 - Recommend quote adjustments based on historical approval trends.
 - **c) Expected Output:** Streamlined quote approval process and reduced delays.
- 37. Order Creation**
- **a) Data Input:** Quote, product, and account details.
 - **b) How We Can Use Gen AI:**
 - Automatically generate and validate order details.
 - Predict fulfillment time based on product availability and past orders.
 - **c) Expected Output:** Faster order creation and fewer manual errors.
- 38. Order Activation**
- **a) Data Input:** Order details, customer confirmation.
 - **b) How We Can Use Gen AI:**
 - Generate confirmation emails and initiate next steps for order fulfillment.
 - Predict order activation delays based on historical data.
 - **c) Expected Output:** Faster order activation, improved tracking.
- 39. Order Fulfillment**
- **a) Data Input:** Order details, shipping info.
 - **b) How We Can Use Gen AI:**
 - Generate shipping labels and tracking updates automatically.
 - Predict potential delays in fulfillment.
 - **c) Expected Output:** Timely order fulfillment, automated notifications.
- 40. Subscription Creation**
- **a) Data Input:** Customer details, subscription plan, billing info.
 - **b) How We Can Use Gen AI:**
 - Generate personalized subscription plans and billing cycles.
 - Predict the customer's likelihood to renew based on past behavior.
 - **c) Expected Output:** Smooth subscription setup and optimized billing cycles.
- 41. Subscription Provisioning**
- **a) Data Input:** Subscription details, customer account data.
 - **b) How We Can Use Gen AI:**
 - Automatically provision services or products for new subscriptions.
 - Generate alerts if provisioning fails.
 - **c) Expected Output:** Accurate service provisioning, fewer errors.

Asset and Entitlement Management

42. Asset Conversion

- **a) Data Input:** Product, account, and transaction details.
- **b) How We Can Use Gen AI:**

- Auto-generate asset records and associate them with the customer.
 - Predict the need for future asset upgrades or maintenance.
 - **c) Expected Output:** Accurate asset records, increased upsell opportunities.
- 43. Entitlement Setup**
 - **a) Data Input:** Support level, customer account, service details.
 - **b) How We Can Use Gen AI:**
 - Auto-generate entitlements based on the customer's contract.
 - Suggest additional service levels or upgrades.
 - **c) Expected Output:** Automated entitlement setup, optimized support levels.
- 44. Asset Tracking Setup**
 - **a) Data Input:** Asset data (serial numbers, purchase date, product type).
 - **b) How We Can Use Gen AI:**
 - Automatically track assets in the system based on serial numbers and product registrations.
 - Predict potential issues related to asset lifecycle and usage.
 - **c) Expected Output:** Accurate asset tracking, better management of asset lifecycles, and proactive maintenance alerts.
- 45. Asset Lifecycle Management**
 - **a) Data Input:** Asset usage data, maintenance logs, warranty information.
 - **b) How We Can Use Gen AI:**
 - Predict when an asset will need maintenance, upgrades, or replacements.
 - Auto-generate reports on the lifecycle stage of assets for proactive planning.
 - **c) Expected Output:** Proactive asset management, reduced downtime, and improved asset utilization.
- 46. Warranty Tracking**
 - **a) Data Input:** Warranty details, product purchase information, customer contracts.
 - **b) How We Can Use Gen AI:**
 - Automatically track warranty periods and notify customers of expiration dates.
 - Predict renewal or extended warranty opportunities based on asset usage.
 - **c) Expected Output:** Improved warranty tracking, higher renewal rates, and reduced warranty-related disputes.
- 47. Entitlement Rules Setup**
 - **a) Data Input:** Customer contract data, service-level agreements, product details.
 - **b) How We Can Use Gen AI:**
 - Automatically generate entitlement rules based on contract terms.
 - Predict when customers will need higher-tier support or additional services based on usage.
 - **c) Expected Output:** Seamless entitlement management, optimized support levels, and better customer experiences.
- 48. Service Level Agreement (SLA) Setup**

- **a) Data Input:** Contract terms, support entitlements, customer service data.
- **b) How We Can Use Gen AI:**
 - Automatically generate SLA agreements based on customer contracts and support needs.
 - Predict SLA breaches and provide solutions to avoid them.
- **c) Expected Output:** Proactive SLA management, improved compliance, and reduced penalties.

49. Maintenance Schedule Setup

- **a) Data Input:** Asset data, product lifecycle information, customer contracts.
- **b) How We Can Use Gen AI:**
 - Generate automated maintenance schedules based on asset usage and wear patterns.
 - Predict future maintenance needs and notify both customer and support teams.
- **c) Expected Output:** Reduced asset downtime, proactive maintenance, and extended asset lifecycles.

50. Upgrade Path Mapping

- **a) Data Input:** Product lifecycle, customer usage data, asset performance.
- **b) How We Can Use Gen AI:**
 - Automatically suggest upgrade options based on asset performance and customer needs.
 - Predict customer readiness for upgrades and create tailored offers.
- **c) Expected Output:** Increased upgrade adoption, personalized customer offers, and better customer satisfaction.

51. Renewal Tracking

- **a) Data Input:** Contract terms, subscription details, usage data.
- **b) How We Can Use Gen AI:**
 - Automatically track renewal dates and generate renewal reminders for customers.
 - Predict likelihood of renewals based on customer engagement and usage patterns.
- **c) Expected Output:** Higher renewal rates, proactive customer communication, and better subscription management.

52. Usage Monitoring

- **a) Data Input:** Customer usage data, product analytics, service logs.
- **b) How We Can Use Gen AI:**
 - Generate real-time usage reports and predict future usage trends.
 - Suggest upsell opportunities based on usage patterns.
- **c) Expected Output:** Better resource management, increased upsell opportunities, and improved customer satisfaction.

53. Compliance Tracking

- **a) Data Input:** Customer contract terms, legal requirements, product usage data.
- **b) How We Can Use Gen AI:**

- Automatically track compliance with contractual obligations and regulations.
 - Predict potential compliance issues and suggest preventive actions.
 - **c) Expected Output:** Improved compliance management, reduced legal risks, and better contract fulfillment.
-

Case and Support Management

54. Case Creation Workflow

- **a) Data Input:** Customer support tickets, email interactions, call logs.
- **b) How We Can Use Gen AI:**
 - Automatically generate and categorize support cases based on customer issues.
 - Predict case urgency and assign priority levels automatically.
- **c) Expected Output:** Streamlined case creation, better case prioritization, and faster issue resolution.

55. Case Assignment Rules

- **a) Data Input:** Case details, agent skills, workload distribution.
- **b) How We Can Use Gen AI:**
 - Auto-assign cases to the most qualified support agent based on case type and agent availability.
 - Predict workload bottlenecks and redistribute cases as needed.
- **c) Expected Output:** Efficient case assignment, reduced resolution times, and improved agent productivity.

56. Priority Matrix Setup

- **a) Data Input:** Case severity, SLA requirements, customer profile data.
- **b) How We Can Use Gen AI:**
 - Automatically generate priority levels for incoming cases based on customer impact and SLA agreements.
 - Predict the most urgent cases based on historical case resolution patterns.
- **c) Expected Output:** Optimized case prioritization, improved SLA compliance, and faster response times.

57. Escalation Rules

- **a) Data Input:** Case status, SLA compliance, customer escalation history.
- **b) How We Can Use Gen AI:**
 - Automatically escalate cases based on case complexity, agent performance, and SLA breaches.
 - Predict potential escalations and generate solutions to prevent them.
- **c) Expected Output:** Reduced escalations, faster issue resolution, and improved customer satisfaction.

58. SLA Monitoring

- **a) Data Input:** Case data, SLA terms, support team performance.
- **b) How We Can Use Gen AI:**
 - Monitor SLA compliance in real-time and predict breaches.
 - Generate reports on SLA performance and suggest areas for improvement.
- **c) Expected Output:** Better SLA compliance, improved customer service, and reduced penalties.

59. Knowledge Base Integration

- **a) Data Input:** Case history, common issues, knowledge base articles.
- **b) How We Can Use Gen AI:**
 - Suggest relevant knowledge base articles for each case to support agents and customers.
 - Predict missing knowledge base content based on unresolved cases.
- **c) Expected Output:** Faster case resolution, more self-service options, and improved support agent productivity.

60. Solution Template Setup

- **a) Data Input:** Common case resolutions, customer issues, case logs.
- **b) How We Can Use Gen AI:**
 - Generate solution templates for recurring issues based on case history.
 - Predict future solution templates for emerging issues.
- **c) Expected Output:** Faster case resolution, more consistent responses, and improved support efficiency.

61. Case Closure Criteria

- **a) Data Input:** Case details, customer satisfaction, issue resolution data.
- **b) How We Can Use Gen AI:**
 - Automatically suggest case closure when all criteria are met.
 - Predict follow-up actions based on past case resolutions and customer satisfaction data.
- **c) Expected Output:** Reduced case handling times, faster case closure, and improved customer satisfaction.

62. Customer Satisfaction Survey

- **a) Data Input:** Case data, customer engagement history, support feedback.
- **b) How We Can Use Gen AI:**
 - Auto-generate personalized customer satisfaction surveys after case resolution.
 - Predict customer satisfaction trends and recommend service improvements.
- **c) Expected Output:** Increased survey participation, better service insights, and higher overall satisfaction.

63. Support Process

- **a) Data Input:** Support tickets, agent performance, customer feedback.
- **b) How We Can Use Gen AI:**
 - Generate automated solutions or troubleshooting guides for common issues.

- Predict potential bottlenecks in support workflow.
 - **c) Expected Output:** Faster support process, more efficient ticket handling.
 - 64. Case Follow-Up**
 - **a) Data Input:** Case history, customer details.
 - **b) How We Can Use Gen AI:**
 - Generate follow-up messages based on case progress.
 - Predict customer sentiment based on past responses.
 - **c) Expected Output:** Consistent case follow-up, better customer engagement.
 - 65. Case Management**
 - **a) Data Input:** Case status, assigned agents, support history.
 - **b) How We Can Use Gen AI:**
 - Suggest solutions based on similar resolved cases.
 - Generate case management reports automatically.
 - **c) Expected Output:** Improved case resolution times, automated reporting.
 - 66. Case Closure**
 - **a) Data Input:** Case resolution, customer feedback.
 - **b) How We Can Use Gen AI:**
 - Auto-generate closure emails and satisfaction surveys.
 - Analyze feedback to predict future support needs.
 - **c) Expected Output:** Faster case closure, improved feedback collection.
-

Customer Experience and Retention

- 67. Know Your Customer (KYC)**
 - **a) Data Input:** Documents like ID, proof of address, and other customer details.
 - **b) How We Can Use Gen AI:**
 - Extract and verify customer details from scanned documents using AI-powered OCR.
 - Automatically flag discrepancies and provide compliance insights.
 - **c) Expected Output:** Faster KYC verification, error-free document extraction, and better regulatory compliance.
- 68. Customer Churn Prediction**
 - **a) Data Input:** Customer purchase history, interaction logs, support tickets, engagement metrics.
 - **b) How We Can Use Gen AI:**
 - Analyze historical data to predict which customers are likely to churn.
 - Generate personalized retention offers or messages based on customer sentiment and behavior.
 - **c) Expected Output:** Reduced customer churn rates, timely intervention to retain customers, and tailored retention strategies.
- 69. Event and Webinar Management**

- **a) Data Input:** Event registrations, attendee engagement data, marketing touchpoints, post-event surveys.
- **b) How We Can Use Gen AI:**
 - Auto-generate follow-up emails, thank-you notes, and event summaries based on attendee behavior and engagement.
 - Predict potential leads and sales opportunities from event attendees based on participation and interactions.
- **c) Expected Output:** Improved post-event engagement, higher lead conversion from events, and automated event follow-ups.

70. Customer Onboarding

- **a) Data Input:** New customer details, product preferences, onboarding steps.
- **b) How We Can Use Gen AI:**
 - Generate personalized onboarding guides based on customer preferences and product use cases.
 - Predict where new customers may need additional support during onboarding based on historical data.
- **c) Expected Output:** Faster and more effective onboarding processes, increased product adoption, and improved first-time customer experience.

71. Cross-Sell and Up-Sell Recommendations

- **a) Data Input:** Customer purchase history, browsing data, interaction logs.
- **b) How We Can Use Gen AI:**
 - Auto-generate product or service recommendations based on the customer's current usage patterns and purchasing behavior.
 - Suggest cross-sell and up-sell opportunities with personalized messages.
- **c) Expected Output:** Increased cross-sell and up-sell revenue, personalized product recommendations, and improved customer satisfaction.

72. Customer Feedback Collection and Analysis

- **a) Data Input:** Feedback forms, survey responses, reviews, social media mentions.
- **b) How We Can Use Gen AI:**
 - Generate summaries of customer feedback, highlighting key trends and recurring issues.
 - Analyze sentiment in customer feedback and provide actionable insights for improvement.
- **c) Expected Output:** Improved product and service feedback loop, proactive customer issue resolution, and insights into customer sentiment.

73. Product Recommendation Engine

- **a) Data Input:** Customer preferences, purchase history, product attributes, browsing history.
- **b) How We Can Use Gen AI:**
 - Use AI to generate personalized product recommendations based on customer behavior and historical data.
 - Generate tailored product marketing content for specific customer segments.

- **c) Expected Output:** Improved personalization of product recommendations, higher customer satisfaction, and increased sales.

74. Knowledge Base Article Generation

- **a) Data Input:** Customer support tickets, common issues, product documentation.
- **b) How We Can Use Gen AI:**
 - Auto-generate knowledge base articles or FAQs based on recurring customer support issues and feedback.
 - Suggest additional content for common troubleshooting topics based on ticket analysis.
- **c) Expected Output:** A continuously updated knowledge base, reduced support workload, and faster issue resolution for customers.

75. Product Training and Tutorial Generation

- **a) Data Input:** Product features, customer usage patterns, support ticket data.
- **b) How We Can Use Gen AI:**
 - Generate personalized product tutorials or guides based on customer needs and frequently asked questions.
 - Predict where customers may struggle with product features and offer proactive training.
- **c) Expected Output:** More effective customer training programs, increased product adoption, and reduced support queries.

76. Social Media Lead Identification

- **a) Data Input:** Social media interactions, customer mentions, hashtags, and comments.
- **b) How We Can Use Gen AI:**
 - Analyze social media data to identify potential leads or customers showing interest in products or services.
 - Auto-generate responses or personalized outreach messages based on identified leads.
- **c) Expected Output:** Improved social media engagement, faster lead identification, and increased sales opportunities from social channels.

77. Proposal Generation

- **a) Data Input:** Customer requirements, product details, pricing, and terms.
- **b) How We Can Use Gen AI:**
 - Generate personalized proposals, including pricing and customization options, based on customer requirements.
 - Suggest proposal content based on similar successful proposals in the past.
- **c) Expected Output:** Faster proposal generation, tailored proposals for each customer, and increased proposal acceptance rates.

78. Billing and Payment Follow-Up Automation

- **a) Data Input:** Invoice data, payment history, billing schedules.
- **b) How We Can Use Gen AI:**

- Automatically generate payment reminders or follow-up messages for overdue invoices.
 - Suggest personalized payment plans or extensions based on customer payment history.
- **c) Expected Output:** Reduced late payments, streamlined billing process, and improved customer satisfaction.

79. Customer Renewal Management

- **a) Data Input:** Subscription data, contract terms, renewal dates, customer usage metrics.
- **b) How We Can Use Gen AI:**
 - Generate renewal reminders or personalized renewal offers based on customer engagement.
 - Predict the likelihood of renewal or churn based on customer behavior.
- **c) Expected Output:** Higher renewal rates, proactive customer retention, and personalized renewal campaigns.

80. Customer Journey Mapping

- **a) Data Input:** Customer interactions, purchase history, touchpoints (email, web visits, etc.).
- **b) How We Can Use Gen AI:**
 - Auto-generate a comprehensive customer journey map highlighting key touchpoints and interactions.
 - Predict potential drop-off points in the customer journey and suggest interventions.
- **c) Expected Output:** Improved customer journey visibility, more personalized interactions, and higher customer retention.

81. Dynamic Discounting

- **a) Data Input:** Customer purchase history, order frequency, cart value, engagement.
- **b) How We Can Use Gen AI:**
 - Automatically generate personalized discount offers based on customer value and likelihood of purchase.
 - Suggest dynamic pricing strategies based on real-time data.
- **c) Expected Output:** Increased conversion rates, higher cart values, and optimized discounting strategies.

82. Email Content Personalization

- **a) Data Input:** Customer data (preferences, history), engagement metrics, marketing goals.
- **b) How We Can Use Gen AI:**
 - Auto-generate personalized email content tailored to the individual recipient's preferences and past interactions.
 - Suggest email send times based on past engagement behavior.
- **c) Expected Output:** Higher open and click-through rates, more relevant email marketing, and increased customer engagement.

83. Multi-Channel Customer Support Integration

- **a) Data Input:** Customer support interactions (email, phone, chat, social), case history.
- **b) How We Can Use Gen AI:**
 - Generate personalized responses to customer queries across multiple channels.
 - Suggest next steps or resolution strategies based on the case history and previous interactions.
- **c) Expected Output:** Faster response times, consistent support across all channels, and improved customer satisfaction.

84. Abandoned Cart Recovery

- **a) Data Input:** Shopping cart data, customer preferences, browsing history, engagement data.
- **b) How We Can Use Gen AI:**
 - Automatically generate personalized messages or offers for customers who abandon their shopping carts.
 - Predict the best timing and channel for abandoned cart follow-up.
- **c) Expected Output:** Higher cart recovery rates, personalized messaging, and increased revenue.

85. Customer Lifetime Value (CLV) Prediction

- **a) Data Input:** Purchase history, engagement metrics, customer demographics.
- **b) How We Can Use Gen AI:**
 - Predict the customer's lifetime value based on past purchasing behavior and engagement.
 - Generate targeted marketing or loyalty programs based on predicted CLV.
- **c) Expected Output:** Improved customer segmentation, more effective marketing strategies, and increased long-term revenue.

86. Automated Contract Negotiation Support

- **a) Data Input:** Contract terms, customer requirements, negotiation history.
- **b) How We Can Use Gen AI:**
 - Generate negotiation scenarios and personalized contract adjustments based on customer feedback.
 - Predict the likelihood of successful contract closure based on historical negotiation data.
- **c) Expected Output:** Faster contract negotiation, better contract terms for both parties, and improved deal closure rates.

87. Predictive Inventory Management

- **a) Data Input:** Product demand, sales history, inventory levels, seasonal trends.
- **b) How We Can Use Gen AI:**
 - Predict inventory needs based on sales patterns, seasonality, and customer demand.
 - Generate reorder recommendations and adjust inventory levels based on predicted future sales.
- **c) Expected Output:** Reduced stockouts, optimized inventory levels, and lower inventory holding costs.

88. Customer Advocacy and Referral Programs

- **a) Data Input:** Customer satisfaction scores, engagement metrics, purchase history.
- **b) How We Can Use Gen AI:**
 - Auto-generate personalized referral invitations and advocacy content based on customer satisfaction and loyalty metrics.
 - Predict the likelihood of a customer referring new leads based on engagement patterns.
- **c) Expected Output:** Increased referrals, higher customer loyalty, and stronger brand advocacy.

89. Smart Routing for Support Tickets

- **a) Data Input:** Support ticket data, customer case history, agent availability.
 - **b) How We Can Use Gen AI:**
 - Automatically route tickets to the best-suited support agent based on case complexity, agent skill sets, and workload.
 - Predict ticket resolution time based on historical ticket data and agent performance.
 - **c) Expected Output:** Faster ticket resolution, more effective support workflows, and improved agent efficiency.
-

Post-Support Analytics and Optimization

90. Customer Satisfaction Survey

- **a) Data Input:** Case data, customer engagement history, support feedback.
- **b) How We Can Use Gen AI:**
 - Auto-generate personalized customer satisfaction surveys after case resolution.
 - Predict customer satisfaction trends and recommend service improvements.
- **c) Expected Output:** Increased survey participation, better service insights, and higher overall satisfaction.

91. Support Analytics Tracking

- **a) Data Input:** Case resolution times, agent performance, customer feedback.
- **b) How We Can Use Gen AI:**
 - Generate real-time analytics on support team performance and customer satisfaction trends.
 - Predict support team bottlenecks and suggest solutions for efficiency improvements.
- **c) Expected Output:** Better support analytics, improved service levels, and more data-driven decisions.

Customer Analytics and Sentiment Use Cases

92. Customer Interest in Leads

- **a) Data Input:** Lead interaction data, browsing history, email open rates, form submissions.
- **b) How We Can Use Gen AI:**
 - Predict the level of customer interest in specific leads based on engagement behavior.
 - Generate lead scoring based on customer interactions with marketing content.
- **c) Expected Output:** More precise lead scoring, better segmentation for sales follow-up, and improved conversion rates.

93. Customer Interest in Products

- **a) Data Input:** Customer browsing data, product clicks, wishlist data, purchase history.
- **b) How We Can Use Gen AI:**
 - Predict customer interest in specific products based on interaction patterns.
 - Suggest personalized product recommendations based on similar customers' interests.
- **c) Expected Output:** Higher product engagement, increased sales, and more personalized product marketing strategies.

94. Customer Sentiment in Agent Response

- **a) Data Input:** Customer support ticket responses, email or chat transcripts.
- **b) How We Can Use Gen AI:**
 - Analyze customer sentiment in responses to agent interactions.
 - Predict customer satisfaction based on tone, language, and agent response patterns.
- **c) Expected Output:** Improved agent training, more effective customer service responses, and better customer satisfaction.

95. Assist Agent in Replies Based on Case History

- **a) Data Input:** Past case history, customer issues, case resolution data, agent notes.
- **b) How We Can Use Gen AI:**
 - Suggest response templates or solutions for agents based on similar past cases.
 - Predict the best course of action for solving customer issues quickly and accurately.
- **c) Expected Output:** Faster case resolution, more consistent responses, and improved agent productivity.

96. Customer Sentiment on a Working Case/Chat

- **a) Data Input:** Ongoing chat or case transcript, customer engagement, sentiment analysis of messages.
- **b) How We Can Use Gen AI:**
 - Real-time analysis of customer sentiment during ongoing support interactions.
 - Provide live feedback to agents on customer mood, allowing them to adjust tone or escalation as needed.
- **c) Expected Output:** Real-time sentiment tracking, reduced customer frustration, and more personalized support responses.

97. Predict Customer Frustration

- **a) Data Input:** Customer interaction data, previous support history, time-to-resolution metrics.
- **b) How We Can Use Gen AI:**
 - Predict when a customer may become frustrated during the support process based on interaction patterns.
 - Suggest proactive steps to reduce friction and improve the support experience.
- **c) Expected Output:** Reduced escalations, improved customer retention, and higher satisfaction rates.

98. Tracking Unpleasant Utterances

- **a) Data Input:** Chat or voice transcripts, call recordings, sentiment data.
- **b) How We Can Use Gen AI:**
 - Automatically detect negative or unpleasant utterances in customer interactions.
 - Predict when customers are likely to express dissatisfaction and alert agents to respond accordingly.
- **c) Expected Output:** Improved monitoring of customer service quality, faster intervention in negative experiences, and improved overall sentiment.

99. Measuring Accuracy of Customer Experience

- **a) Data Input:** Customer feedback, survey data, interaction logs, sentiment analysis.
- **b) How We Can Use Gen AI:**
 - Analyze the accuracy of responses and solutions provided by agents during support interactions.
 - Predict which areas of customer experience need improvement based on feedback trends.
- **c) Expected Output:** Improved accuracy in support processes, higher CSAT (Customer Satisfaction) scores, and enhanced customer retention.

100. Customer Experience Insights from Chat Interactions

- **a) Data Input:** Chat logs, customer feedback, response times, case resolution data.
- **b) How We Can Use Gen AI:**
 - Extract key insights from chat interactions about the overall customer experience.

- Predict potential friction points in the chat flow and provide recommendations for smoother interactions.
- **c) Expected Output:** Streamlined chat processes, improved agent efficiency, and higher customer satisfaction.
